

# HBA370-HD Split Seat Chair

This combination over-toilet aid and shower chair is a clever bariatric solution suitable for patients up to 227kg. Made of tough, heat treated aluminium tube it is lightweight while still sufficiently sturdy. The patented split seat is padded for extra comfort and the seat surface is anti-bacterial treated. It allows easy access for cleaning body parts from the front or the rear without requiring the patient to stand.

The micro adjustment extension legs can be individually raised or lowered to compensate for uneven floors and the suction rubber tips ensure the chair is unlikely to slip on even smooth bathroom floors.

Combination over-toilet aid and shower chair
